RESPONSIBLY PRODUCED TIMBER

Wijma operates its own concessions in West Africa where various species of timber are felled by our own workers, using responsible methods. This includes many timber species as well as timber bearing the FSC label.

Our concessions and our trading contacts enable us to supply an extremely wide range of timber products in just about any species and grade.

Where non FSC-labelled timber is concerned, we also do all we can to verify the origin and legality of the timber.

ENVIRONMENT

Timber isn't just organic: to grow a cubic metre of wood requires little more than solar energy! Wood places virtually no strain on the environment while it is growing, during its use, and even afterwards.

By and for nature: timber is energy-efficient, sustainable, and naturally beautiful.

WIJMA - NOISE BARRIERS

In natural harmony with almost every landscape, noise barriers made of timber or composite barriers using timber and other materials.

Printed on chlorine-free paper which conforms to ISO 91400, EMAS and FSC norms.

FSC Trademark © 1996 Forest Stewardship Council A.C.
The FSC logo stands for forests which have been certified according to the guide lines of FSC.

Subsidiary of the Koninklijke Houthandel
G. Wijma & Zonen B.V.

The natural solution for noise pollution

In many countries with a high traffic density, noise barriers are needed to protect residential areas from motorway noise. Although this measure is often regarded as a necessary evil, this does not have to mean that the view from the motorway has to be boring and monotonous. It is also possible for noise barriers to be naturally integrated into the landscape, or to achieve the opposite effect, for them to become a striking eye-catcher.

In both cases, timber can play a leading role in the construction, also when used in combination with other materials such as glass, metal and concrete.

Every species of timber, every finish, every application, has its own unique look and feel.

There are so many different species of timber which can be used in so many ways, and in combination with so many other materials, that the options which are available are almost unlimited. Numerous varieties of soft- and hardwood timber, from tropical or European sources, impregnated or painted as desired: every species of wood, every finish, and every application has its own unique look and feel.

Using timber it is possible to meet the specific requirements of every new project – even, for example, non-standard constructions – more easily and with

far greater precision than any other material. Wood is, by its very nature, so very versatile...

PROJECT DEPARTMENT

Wijma's project department prides itself on its extensive practical experience with timber in general, and the application of wood in noise barriers in particular. Taking into account the specific objective (reflection or absorption), the environment in which the construction must be realised, other functional and aesthetical requirements, and of course the available budget, we are always pleased to think along with you and help to achieve a superior design.
