RESPONSIBLY PRODUCED TIMBER

Wijma operates its own concessions in West Africa where various species of timber are felled by our own workers, using responsible methods. This includes many timber species as well as timber bearing the FSC label.

Our concessions and our trading contacts enable us to supply an extremely wide range of timber products in just about any species and grade.

Where non FSC-labelled timber is concerned, we also do all we can to verify the origin and legality of the timber.

ENVIRONMENT

Timber isn't just organic: to grow a cubic metre of wood requires little more than solar energy! Wood places virtually no strain on the environment while it is growing, during its use, and even afterwards.

By and for nature: timber is energy-efficient, sustainable, and naturally beautiful.

WIJMA - JETTIES / PONTOONS / DECKING / PILING

Timber jetties and pontoons, a natural companion to water. Whether fixed or floating, always Wijma.

Printed on chlorine-free paper which conforms to ISO 91400, EMAS and FSC norms.

FSC Trademark © 1996 Forest Stewardship Council A.C. The FSC logo stands for forests which have been certified according to the guide lines of FSC.

Subsidiary of the Koninklijke Houthandel G. Wijma & Zonen B.V.

Wijma

The Netherlands, Brazil, Cameroon, France, Germany, Ghana, Great Britain, Ivorycoast.

Jetties and pontoons, decking and piles, made from long lasting timber.

JETTIES/COMPONENTS

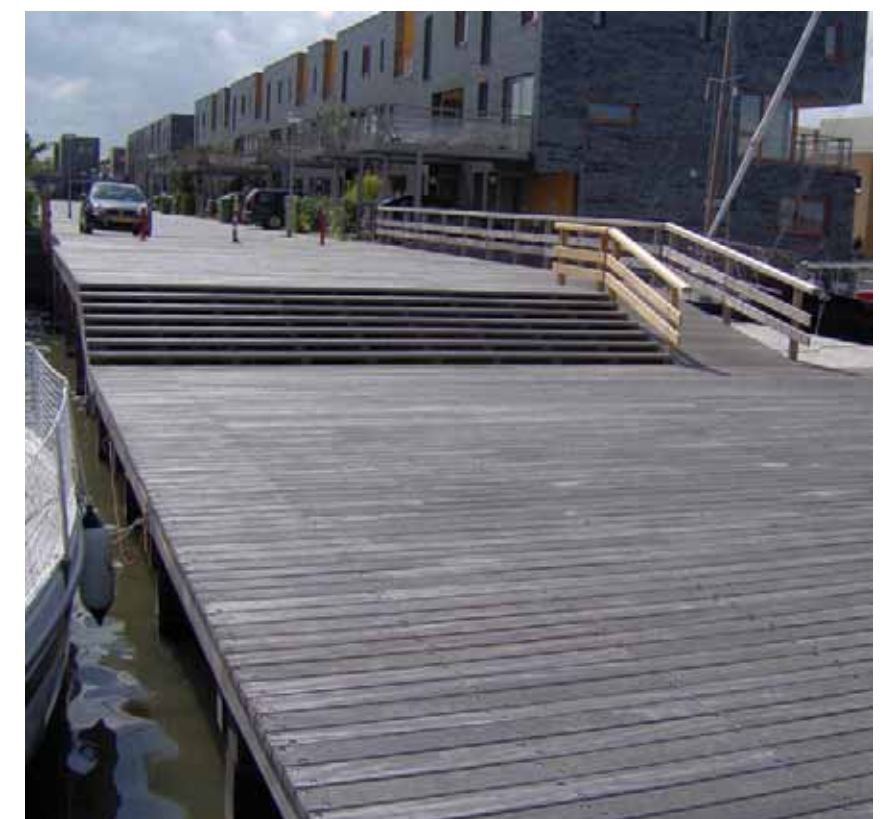

Wijma's permanent range of products contains a wide assortment of finished and unfinished timber for fixed jetties and decking, including piles, bearers, diagonals and decking. In numerous lengths, dimensions and grades. Complete boardwalks and other structures can be supplied prefabricated or pre-finished, leading to an appreciable reduction in fitting time on site.

PILING TIMBER

Our extensive stock enables us to supply most types of piling timber for foundations, jetties or mooring posts, of various types, such as:

- Sawn piles in Azobé, Tali or Demerara Greenheart, up to approximately 12 metres.
- Hewn square piles in Basralocus up to approximately 20 metres or naturally round piles in Demerara Greenheart up to approximately 21 metres, and round piles in Cloeziana (Eucalyptus, always with FSC) or Kakaralli up to approximately 14 metres lengths.

Wijma jetties and pontoons have an established presence all over the world and are never out of place, even on the smallest stretch of water.

A pleasant and tough outdoor floor...

Wijma is quite rightly famed throughout the world for its jetties which have proven their place in countless leading marinas. Water compartments in concrete or timber, boardwalks supplied in a selection of timber species and including customised detailing if requested (such as the initials of the owner on the bollards). Comes in standard 600cm lengths, and various widths as required. Whether it's our design or your own, our project department is happy to design the construction details and work the drawings into a suitable specification.

Whatever the choice of timber, the finish, the total construction and detailing; the end result will always be attractive and in harmony with its surroundings. Wood and water go together naturally. And Wijma is the natural woodworking partner which allows the inner beauty of the wood to be highlighted in all its projects.
