RESPONSIBLY PRODUCED TIMBER

Wijma operates its own concessions in West Africa where various species of timber are felled by our own workers, using responsible methods. This includes many timber species as well as timber bearing the FSC label.

Our concessions and our trading contacts enable us to supply an extremely wide range of timber products in just about any species and grade.

Where non FSC-labelled timber is concerned, we also do all we can to verify the origin and legality of the timber.

ENVIRONMENT

Timber isn't just organic: to grow a cubic metre of wood requires little more than solar energy! Wood places virtually no strain on the environment while it is growing, during its use, and even afterwards.

By and for nature: timber is energy-efficient, sustainable, and naturally beautiful.

WIJMA - BUILDING INDUSTRY

Versatile and durable with a traditional character, aesthetically pleasing and 100% natural: timber for the building industry.

Printed on chlorine-free paper which conforms to ISO 91400, EMAS and FSC norms.

FSC Trademark © 1996 Forest Stewardship Council A.C. The FSC logo stands for forests which have been certified according to the guide lines of FSC.

Subsidiary of the Koninklijke Houthandel G. Wijma & Zonen B.V.

Wijma

The Netherlands, Brazil, Cameroon, France, Germany, Ghana, Great Britain, Ivorycoast.

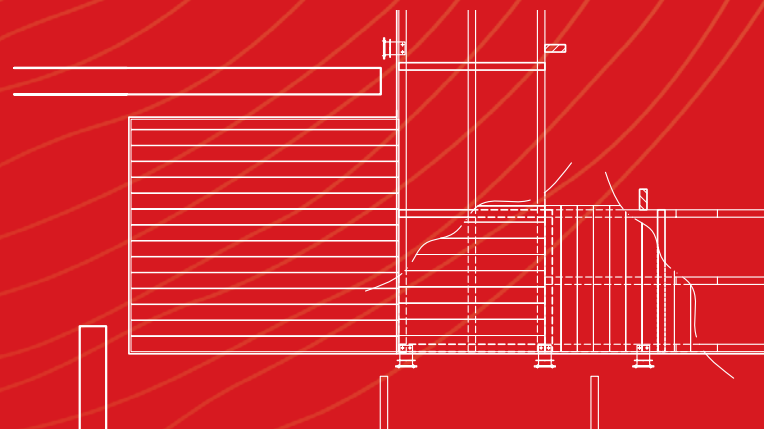

Balconies, staircases, boardwalks and load-bearing structures: looking good, made from wood.

From ancient times...

The use of timber as a construction material goes back almost as far as humanity itself. From the moment that the early nomads first started to settle and build houses and forts, man has used wood. And these days it is still an important building material and more: the use of timber enables both architect and contractor to demonstrate their skills. And because timber is so versatile, it becomes a challenge to use it to optimum efficiency in a constructional, architectural and economical sense. A combination of original construction methods, distinguished architecture, and inexpensive as well? With timber it is all possible.

There are so many different species of timber, each with their own distinguishing qualities, that for just about every application a suitable species is available.

Balconies, staircases, boardwalks, and load-bearing structures such as columns and bearers are both good looking and durable, and in many cases less costly when constructed from wood rather than other materials. Provided they are well-chosen and implemented, timber building elements add extra charm and style to any building project.

SUPERVISION

Wijma's project department is familiar with all species of timber which are used in the building industry, and combines this know-how with an extensive practical experience. Our team of experts give us true added value when it comes to making responsible choices, making structural calculations and drawing up specifications. From the drawing board to completion, and also for assembling entire prefabricated structures, you can leave the job to us.

WELL-STOCKED SAWMILL

Our permanent huge stock of timber in countless varieties, together with our own large-capacity sawmill enables us to guarantee a high level of service. We offer just-in-time delivery meeting the specification as ordered, and sawn to the required length, including FSC certified timber such as Azobé

(Ekki), Bilinga (Opepe) and Tali from our own concessions in Africa, or Brazilian timbers such as Massaranduba or Cumaru. For our complete range please visit our website at www.wijma.com.

It's no wonder that Wijma is a leading player in the world of wood.
